Overview

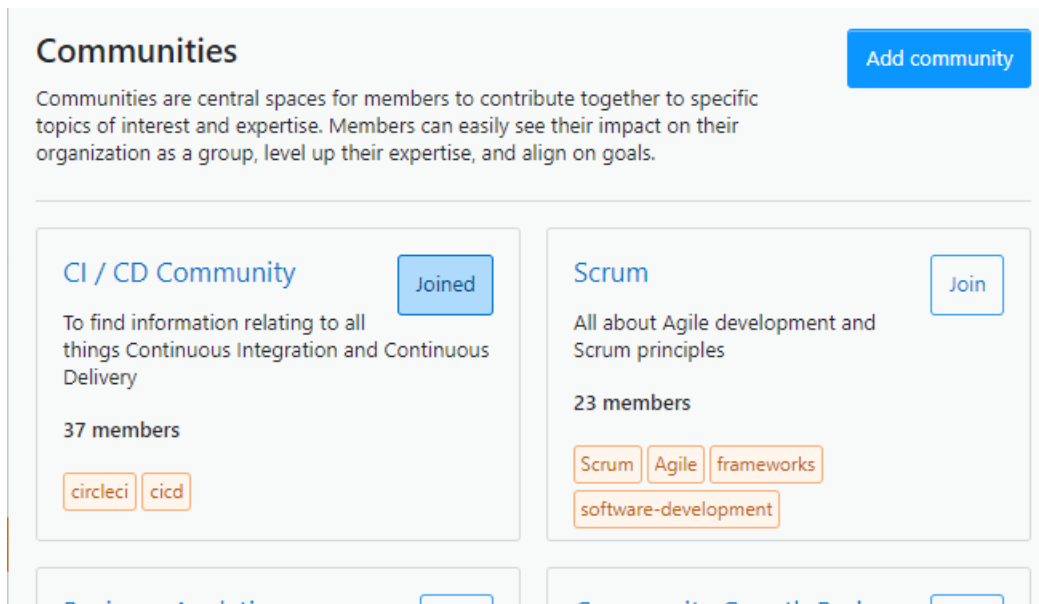

The Stack Overflow Communities feature offers an exciting way for users to engage and collaborate across shared interests, projects, or expertise. Communities are self-organizing groups where members can:

- Share and learn together
- Grow their knowledge and expertise
- Solve problems
- Build connections and break down knowledge silos

At their heart, Communities are organized around one or more content tags. Communities automatically include questions, answers, Articles, and Collections that contain at least one of the defined tags. Content that contains additional tags not defined by the Community is still included. You can create up to eight Communities.

Access and Manage Communities

To access the Communities area, click **Communities** in the left-hand menu. The Communities home page shows existing Communities with their name, description, number of members, and associated tags.

To join any Community, click the corresponding **Join** button. If you've already joined a Community, you'll see "Joined". To leave a Community, click **Joined** (this button becomes **Leave** when you hover over it with your mouse).

Click on any Community title to enter that Community. The Community overview page appears, listing member statistics, Community insights, recent activity, trending posts, and other details about the Community.

In addition to the default **Overview** tab, you can focus your view by clicking **Questions**, **Articles**, **Collections**, or **Members** at the top of the page.

I'm attempting to use GitHub Actions to deploy some Terraform. In the Terraform I am creating

Add Content to a Community

Any member can add content from inside a Community by clicking **Add to Community**, then selecting **Question**, **Article**, or **Collection**.

The process for adding content from inside a Community is the same as from elsewhere on the site, with one exception: Stack Overflow will automatically populate new questions and Articles with the Community's tags. Before submitting, you can add or delete these tags. If you remove all of the Community's tags, however, your new content won't appear in the Community.

You can achieve similar results by adding content (for example: asking a question) from within the main site. Be sure to include at least one of the Community's tags, and your new content will appear in the Community.

Community Alerts, Updates, and For You

Your "For You" area will notify you when you've joined a community or have been added to a Community by someone else. Additionally, all users will see Community activity in the weekly digest email, which will highlight new Communities created in

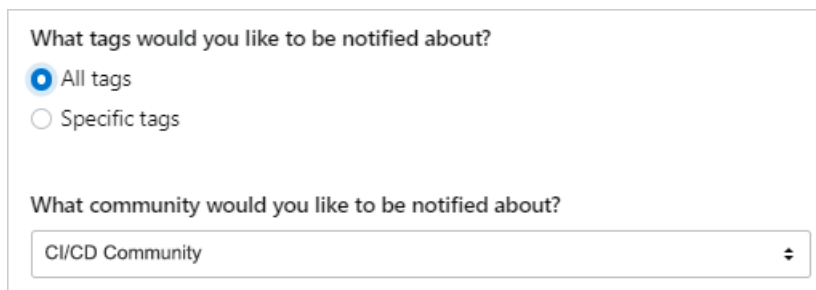

the past month and largest Communities (by member count).

Integrations

You can monitor Community activity (questions, answers, Articles) in both Slack and Microsoft Teams, receiving alerts when someone adds a new question, answer, or Article in your Community.

Slack

To create a Slack notification for a Community, click your avatar (profile image) then **Account settings**. Click **Slack integrations** under the "APPS & INTEGRATIONS" heading. Click **Create Slack notification**. In the "Get notifications in Slack" dialog, you must select **All tags**. If you select **Specific tags** instead, Stack Overflow will gray out (disable) the Community selector.

What tags would you like to be notified about?

Artificial Intelligence and Machine Learning

general

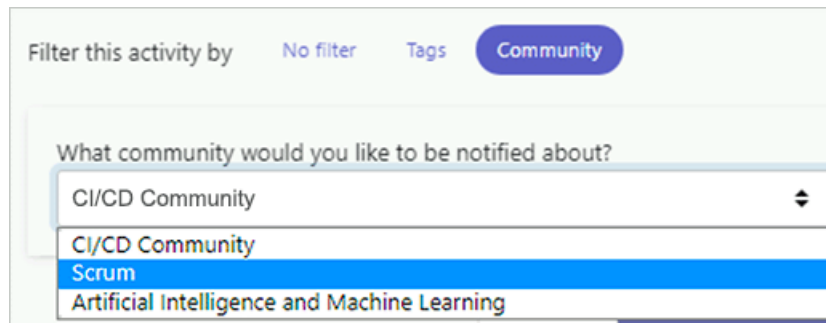

Microsoft Teams

To create Microsoft Teams notifications for Communities, go to your Stack Overflow Microsoft Teams integration. Click **Notifications**, then use the "What activity..." checkboxes to select the type of activity you want to receive notifications for. In the "Filter this activity by" area, click **Community**.

The screenshot shows the 'Stack Overflow Enterprise' header with navigation links for Home, Chat, Notifications (which is underlined), and About. Below the header, the section is titled 'Get notifications from Stack Overflow'. It asks 'What activity type would you like to be notified about?' and lists six options with checkboxes: Questions, Edited questions, Answers, Updated answers, Accepted answers, and Comments. Below this, it says 'Filter this activity by' followed by three buttons: 'No filter' (highlighted in blue), 'Tags', and 'Community'. At the bottom right are 'Cancel' and 'Create notification' buttons.

With the **Community** filter selected, you'll see a pull-down menu that lists all Communities you're a member of. Select the Community you want to receive notifications for.

This screenshot shows a close-up of the 'Filter this activity by' section where the 'Community' button is selected. Below it, a dropdown menu is open with the title 'What community would you like to be notified about?'. The menu lists three communities: 'CI/CD Community', 'Scrum', and 'Artificial Intelligence and Machine Learning'. The 'Scrum' option is currently selected and highlighted in blue.

Click **Create notification** to accept your selections and create the Community notification.

Learn more about setting up [Slack](#) and [Microsoft Teams](#) integrations.

Add a Community

Users granted rights to create new Communities will see an **Add community** button at the top of the Communities home page. Click this button to create a new Community.

Create new community

Community name

Artificial Intelligence and Machine Learning

Community purpose

All things AI and ML, with a focus on how we can leverage these technologies.

Tags

At least one tag is required.

AI X ML X Language models X

Members Optional

Who should contribute to community activities and content? You can also add subject matter experts to the community.

User 123 X

User 456 X

Suggested members

No suggestions at this time.

Create community

Cancel

In the "Create new community" box, enter a **Community name** and **Community purpose** (description) for the new Community. In the **Tags** area, select at least one tag (up to a maximum of 30 tags) to define your Community's content focus. Your new Community will automatically include any questions, answers, or Articles that contain any one of these tags. When users create new content from inside the Community, Stack Overflow will automatically pre-populate these tags.

NOTE: In order to avoid duplicates, you can't create a Community with the same name or exact set of tags as an existing Community.

In the **Members** area, Stack Overflow will suggest subject matter experts and top contributors for your selected tag(s). Click **Add** on each suggestion to accept. Your user name will appear automatically in the **Members** list as well. Click the **X** button by your name to remove yourself if you don't want to be a member of the new Community.

You can also manually locate and add members to your new Community, including individual users, groups, and departments. Adding members to a Community at creation is optional—anyone can join the community later, and community creators, admins, and moderators can also add or remove members. There's no limit to the number of members a Community can have.

NOTE: Adding members to a new Community on creation—especially those with subject matter expertise—can help jump-start engagement.

Edit or Delete a Community

From within a Community, the Community creator, admins, or moderators will see a **Manage** button in the upper-right corner (other users will not see this button). Click **Manage**, then **Edit** or **Delete Community**.

Editing a Community allows you to change the name, description, tags, and member roster. Deleting a Community removes it completely from your Stack Overflow site.

NOTE: Exercise caution when changing your Community's tags, as adding or removing tags can dramatically change the content of your Community.
