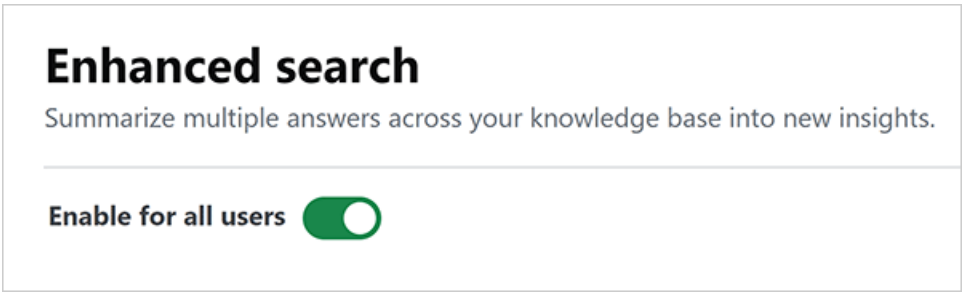
Overview

The Stack Overflow Enterprise (SOE) Enhanced Search feature uses AI to summarize search results in your site. In addition to quickly finding the content they need, users can save the summary and turn it into a new question and answer on your SOE site. This captures the AI-generated content to benefit other users.

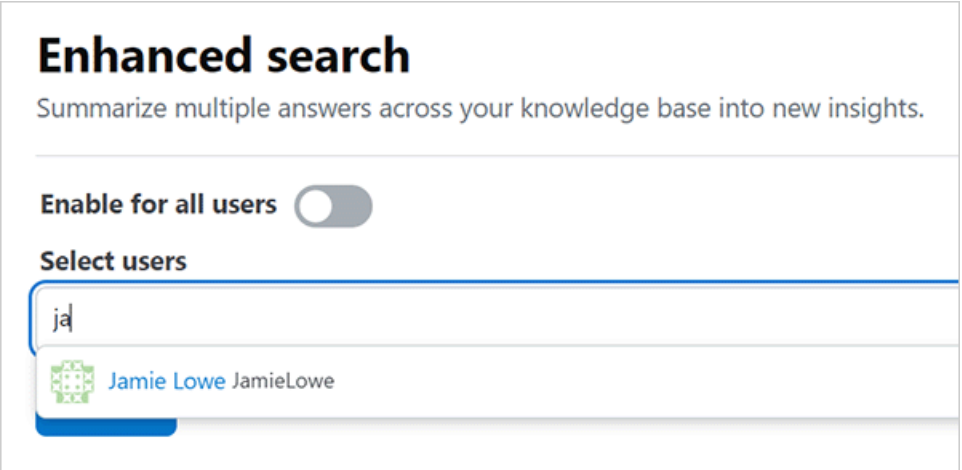
In your admin settings "AI" section, click **Configure** to control user access to Enhanced Search. The access settings page will appear.



To turn on Enhanced Search, click the control to toggle it **on**. To turn off Enhanced Search or restrict access to certain users, click the control to toggle it **off**. This will turn off Enhanced Search for all users unless you grant specific access.

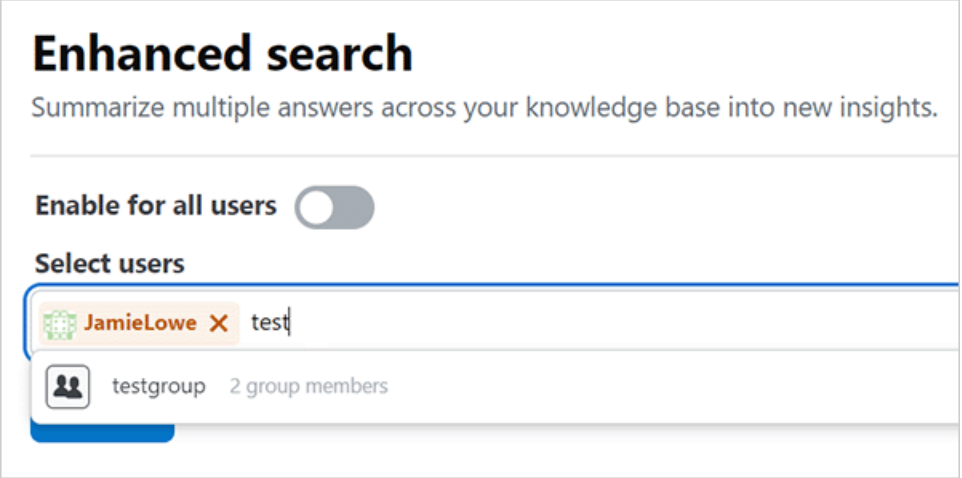
Grant access to specific users

To allow only selected users access to Enhanced Search, enter each name into the **Select users** box. When you see the correct name in the search results, click on it to select it. You can add as many individual users as you like.



Grant access to user groups

You can also use the **Select users** box to locate user groups. Enter the name of a user group. When you see the group name in the search results, click on it to select it. You can add user groups and individual users in any combination and quantity.



Remove access to users or groups

To remove users or groups from the access list, click **X** next to the user or group name.
